# Optical Cable and Accessory for TV Camera

An installation example of a TV camera cable and accessory in stadium is shown here. Optical composite cables for TV cameras are used to connect different camera positions around the field with the arrayed terminal board on the relay mobile. Employment of an optical cable and accessory for TV camera enables real-time transmission of high-quality information.

An installation example of a TV camera cable and accessory in a studio is shown here. Camera positions around the studio are connected with the sub control room using optical composite cables for TV camera. When patch panel is provided, all kinds of video images on different channels become available. Employment of an optical cable and accessory for TV camera enables real-time transmission of high-quality information.

# Configuration of Optical Composite Cable for TV Camera

## Pattern 1

- Design of the cable with panel mounting connectors.

## Pattern 2

- Design of the solution with break out connector and JJ adapter.

## Pattern 3

- Design of the solution by FOP unit or fusion splicing unit.

	Pattern1	Pattern2	Pattern3	Remarks
Initial Install cost	○	△	×	
Initial Install time	○	○	△	
Cabling by cable ladder	○	○	○	
Cabling by Free-access floor	○	○	○	
Cabling by cable pipe	×	×	○	
Cabling for short length	○	○	○	It is up to around 30 m
Cabling for long length	×	×	○	
Maintenance cost after install	×	○	○	Easy to change the connector

# Optical Composite Cable for TV Camera (U.S. Standard: SMPTE)

## Type: TV-OM-AMS

## Type: TV-OM-SAMS

### Description

This composite cable integrates power line for TV camera, control line, and optical fiber for video and audio transmission. The cable is standardized by SMPTE as a cable for TV camera.

\* The cable diameter can be changed as requested by using a double sheath.

### Specifications

#### ● Structure

### Applications

#### ■ Multipurpose cable: TV-OM-AMS

This cable is suitable for wide applications such as fixed installation in facilities, relay cable, handy camera cable and patch cable.

#### ■ Multipurpose cable: TV-OM-SAMS

This is a cable for large-sized TV cameras in studios. The cable has a larger outside diameter due to the additional sheath on a multipurpose cable in order not to be jammed between the camera pedestal dolly and the floor in studios.

Core number	Core name	Core color
1	Optical fiber	Blue
2		Yellow
3	Control line	Red
4		Gray
5	Power line	Black
6		White

#### ● Optical fiber

Item	Condition	Characteristics	Conversion	
			Condition (km)	Formula
Transmission loss	$\lambda=1.31 \mu\text{m}$	$0.5 \text{ dB/km} \geq$	$L \geq 0.4$	$0.5 \times L \text{ dB} \geq$
			$L < 0.4$	$0.5 \times 0.4 \text{ dB} \geq$

Item	Description

#### ● Mechanical characteristics

Item	Characteristics
Allowable tension	700 N
Allowable bending radius	Six times the cable outside diameter or larger

\*SMPTE stands for The Society of Motion Picture and Television Engineers.

\*These cables meet SMPTE311M.  
(TV-OM-AMS : AWM21480)

# Optical Composite Cable for TV Camera (Japan Standard: ARIB)

## Type: 2SM-9.2-37.5

### Description

This composite cable integrates power line for TV camera, control line, and optical fiber for video and audio transmission. The cable is standardized by ARIB as a cable for TV camera.

- \* The cable diameter can be changed as requested by using a double sheath.
- \* The cable is available in two kinds: mobile cable for use in studios or relay fields; and static cable for use in fixed installation.

### Specifications

# Connector Assembly

## Connector-Terminated Cable

**Description** This cable assembly connects power lines, control lines, and optical fibers. It should be noted that they are not compatible with each other. Refer to “Selection Table of Connector and Cable” on the next page, since each connector has its own attachable cables.

### 3K series (ARIB and SMPTE standards)

#### Multipurpose cable

<Type: FUW-SUS#/AMS\*\*\*\*/PUW-SUS※>

#### Cable for large-sized studio camera

<Type: FUW-SUS#()/SAMS\*\*\*\*/PUW-SUS※()>

Stair-like removal of outer sheath is needed for 3K type connector of large-sized studio camera. Please order with the indication of length for removal sheath more than 400 mm.

Customer specified (1) #, ※ : Green, Black, Red, Gray, Yellow (Color ring)  
(2) \*\*\*\* : Cable length

### OPS series

#### Multipurpose cable

<Type: OPS-P#/AMS\*\*\*\*/OPS-J※>

#### Cable for large-sized studio camera

<Type: OPS-SP#()/SAMS\*\*\*\*/OPS-SJ※>

Customer specified (1) #, ※ : Green, Black, Red, Gray, Yellow, Blue, Pink, White (Color ring)  
(2) \*\*\*\* : Cable length

## Panel-Integrated FOP Unit

### Description

The connector panel and termination box are integrated to create this compact unit. With all optical cords equal in length, workability is improved and installation methods can be unified without much concern over the terminal board size during design. Moreover, optical cords can be handled without fear of damage when the panel is removed for maintenance.

### FOP Unit

Category	No. of cable	Type number	Dimensions (mm)		
			A (height)	B (width)	C (depth)
2U	1	2U-FOP1/ *** /N	88	142	170

## FOP Unit with Circuit Breaker

### Features

- Surge protection circuit has been combined with the panel-integrated optical joint box, i.e. FOP unit, with a size increase of only 15 mm in the depth.
- Peak surge voltage is suppressed by about half, and the total energy, i.e. voltage multiplied by time, down to 0.1 msec after the outbreak of a surge is reduced by a factor of 7 to 10.
- By manipulating a switch on the panel, the surge ingress circuit is cut off electrically.  
Evaluation method: Corresponding to the level 4, i.e. 4 kV x 1.2/50 μsec by IEC61000-4-5 (Surge immunity test)

### Applied waveform

### Output waveform

## 1 What is the optical fiber with maximized bendability ?

This is a novel optical fiber developed by Furukawa Electric which permits flexible optical wiring.

- The allowable bending radius for the fiber is 15 mm, one half the conventional values.
- The fiber can be jointed with conventional single-mode fibers.
- The fiber is in compliance with ITU-T G.652 B standard.
- The fiber can be used at a wavelength band of 1280~1625 nm.

## 2 What is single-mode fiber (SM) or multi-mode (GI) fiber?

### ● Graded-index fiber, GI fiber

In graded-index fiber, the refraction index in the core is graded to gradually increase farther to the center.

Thus, the refractive index at the axis is higher slowing the speed of light rays, while that near the cladding is lower increasing the light speed. Because light speed is inversely proportional to refractive index, this reduces the arrival time disparity to have all modes (light rays (1), (2) and (3) in the Figure) arrive at about the same time, resulting in improved transmission characteristics or transmission bandwidth. Fibers with a core diameter of 50  $\mu\text{m}$  or 62.5  $\mu\text{m}$  are widely used at a transmission wavelength of 0.85  $\mu\text{m}$  or 1.3  $\mu\text{m}$ .

### ● Single-mode fiber, SM fiber

Whereas multi-mode fiber supports many modes within its core, fiber with a much reduced core diameter of, say 10  $\mu\text{m}$ , can support only the fundamental mode of propagation as shown in the Figure. There is no waveform distortion due to arrival time disparity because only one mode propagates along the fiber. This type of fiber is called single-mode fiber, and its refractive index distribution is generally step-like. Single-mode fiber is suited for high-speed, high-capacity transmission systems because of its superior transmission characteristics, and is used at a wavelength of 1.31  $\mu\text{m}$  or 1.55  $\mu\text{m}$ , at the former of which ordinary silica fibers have zero chromatic dispersion.

## 3 What is transmission bandwidth?

In designing optical fiber communication systems, amplitude response in the baseband is used. Transmission bandwidth refers to a modulation frequency  $f_b$ , at which the baseband amplitude response expressed as  $\log|H(f_b)|$  equals -6 (dB). Thus, it gives a rough estimate of up to which frequency the signals are transmitted without being distorted.

#### 4 What is transmission loss?

Taking two points  $Z_1$  and  $Z_2$  along an optical fiber ( $Z_2 > Z_1$ ) and letting the magnitudes of optical intensity at these points be  $P_1$  ( $Z_1$ ) and  $P_2$  ( $Z_2$ ), respectively, the transmission loss in this section can be expressed as  $\alpha = -\log(P_2/P_1)$  (dB). Thus, it corresponds to the ratio of optical energy being transmitted at these points. The transmission loss of an optical fiber comprises absorption loss that turns into heat and scattering loss or radiation loss that leaks out of fiber, and therefore, it depends on the wavelength and spectrum of light source, incident mode distribution and so forth.

#### 5 What is cutoff wavelength?

Cutoff wavelength of a single-mode fiber is the wavelength above which the fiber supports and propagates only one mode of light. The cutoff wavelength is dependent on the fiber structure such as refractive index distribution within the core, core dimension and the like.

#### 6 What if a heavy load falls onto the optical cable?

The results will depend on what structure the cable you stepped on has. As for the cables of the Company, increase in transmission loss generally appears at approximately 10,000 N as illustrated in the Figure. But loss increase can appear at around 5,000 N depending on the structural design or material selection.

#### 7 To what degree of bending can an optical cable resist for light transmission?

The Figure shows the performance of our cable using the new optical fiber with maximized bendability in comparison with that of conventional ones.

## Flowchart from Cable Installation to Completion of Jointing

### ■ Cable route confirmation

- Does the route have bending?
- What about cable installation conditions such as piping, ladder and rack?
- Is the distance to power lines sufficient?
- Is there no fear of submersion?
- Is there any possible influence of small animals including rat?

### ■ Specification of terminal board

- What is the size of terminal board? Where is the termination box to be placed?
- What would be the entry route of the cable into the terminal board?
- Is there any coexistence of other cables?
- Does the board have door? What would be the situation when in operation?
- What is the height of the terminal board from the floor?
- Is connector guide bar necessary?

### ■ Installation

- Is the cable surplus length sufficient for maintenance?
- Can the cable be accommodated without any twist or tight bending?
- Is the metal cable securely terminated without any loosening or misalignment?
- Have the optical fiber fusion splicing procedures been securely carried out?

### ■ Inspection

#### Conduction test

#### Crossed line test

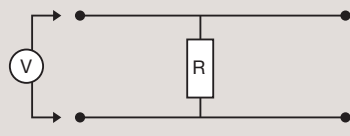

#### ● Measurement using TDR

## Withstand voltage test

**If not OK, i.e. insufficiently insulated:**

- It is likely that water has seeped into the cable.
- It is likely that the cable is collapsed.
- It is likely that water or electrically conductive substance has entered into the cable.
- Some other reasons.

The closer is R to infinity, the better.

## Optical transmission loss

### ● Optical power meter method

Optical transmission loss of the object under test is  $|P_0 - P_1|$ .

### ● Optical Time Domain Reflectometer (OTDR) method

#### 1. Principle

When an optical pulse is input at one end of an optical fiber, the pulse propagates along the fiber with its intensity being attenuated due to the radiation and absorption losses. On the other hand, small portions of the light pulse are reflected by such causes as Rayleigh scattering, fiber fracture and the mirror surface at the output end of the fiber, propagating back to the input end in succession. These reflected pulses represent, when accumulated over time and displayed on a screen with respect to fiber length, a waveform from which useful information on the fiber is obtained including splicing loss, transmission loss, line length and fault location.

#### 2. Measurement example

An example of line measurement is shown in the Figure.

## **Furukawa group's Distributor**

### **Furukawa Sangyo Kaisha, Ltd. (FSK Japan Headquarters)**

21-3-4, Shimbashi Minatoku, Tokyo 105-8630 Japan

Tel: +81-3-5405-7590 Fax: +81-3-5405-7716 <http://www.furusan.co.jp/english/>

### **Furukawa Sangyo Shanghai Co., Ltd.**

RM.18c Jiu Shi Fu Xing Mansion, No.918, Huai Hai Zhong Road, Shanghai

Tel: +86-21-6415-7294

### **Furukawa Sangyo Shanghai Co., Ltd. Beijing Representative Office**

Room 27A, Citic Building, No.19 Jianguomenwai Street, Chaoyang District, Beijing, P.R.China 10004

Tel: +86-10-8526-1550 Fax: +86-10-8526-1552

### **Furukawa Sangyo Kaisha (H.K.) Ltd.**

No.2809, 28/F, The Metropolis Tower, No.10, Metropolis Drive, Hung Hom Kowloon, Hongkong

Tel: +852-2865-2128 Fax: +852-2861-0549

### **Furukawa Sangyo Kaisha (H.K.) Ltd. Taiwan Branch**

Rm. 405, 4F., No. 131, Sec. 3, Minsheng E. Rd., Songshan Dist., Taipei City 10596, Taiwan (R.O.C.)

Tel: +886-2-2718-1328 Fax: +886-2-2718-8281

### **Furukawa Sangyo Korea Co., Ltd.**

212 Kyeongin Ilbo B/D, 299, Hyowon-Ro, Paldal-Gu, Suwon-Si, Gyeonggi-Do, Korea

Tel: +82-31-898-7688 Fax: +82-31-898-7690

### **Furukawa Sangyo Kaisha (Malaysia) Sdn. Bhd.**

1106, 11th Floor, Amcorp Tower A, Amcorp Trade Center, 18 Jalan Persiaran Barat,

46050, Petaling Jaya, Selangor Darul Ehsan, Malaysia

Tel: +603-7957-7000

### **Furukawa Sangyo Kaisha India Pvt. Ltd. (FSKI)**

6/F, Flat No.607, Global Foyer, Golf Course Road, Sector 43, Gurugram, Haryana- 122022, India

Tel: +91-124-4831-800 Fax: +91-11-4717-7113

### **Furukawa Sangyo Kaisha (Thailand) Ltd.**

No.191 Silom Complex Building, 16th Floor, Unit 4, Silom Road, Kwaeng Silom, Khet Bangrak,

Bangkok 10500 Thailand.

Tel: +66-2-105-4051 Fax: +66-2632-1078

### **Furukawa Sangyo Kaisha Philippines, Inc.**

Bldg. 5 & 6 Panorama Compound 5, Laguna Technopark Annex, Binan Laguna, Republic of the Philippines

Tel: +63-2571-2752 Fax: +63-2571-2701

### **Furukawa Sangyo North America, Inc. (FSNA)**

1871 The Alameda, Suite350, San Jose, CA95126 United States of America

Tel: +1-408-496-0051 Fax: +1-408-496-0052
